

contrAvision® Digital XR™

Eco-solvent printable one-way vision glazing enhancement film

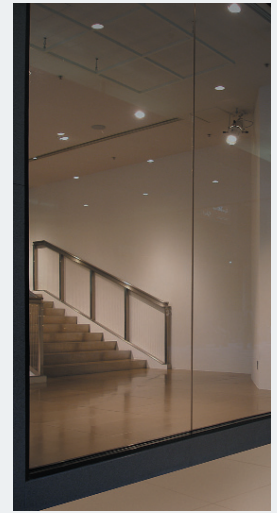

Digital XR™ is designed to simplify and improve the production of one-way vision window graphics for promotion, display, privacy and corporate identity applications. The full colour printed graphic is vibrant and highly visible on the viewing side and provides a clear tinted outlook through the reverse view.

This innovative material offers substantial performance and environmental benefits compared to traditional perforated films. The polyester based film can be imaged at high resolution and as there are no perforations to collect dust, dirt or moisture, the overall performance and visual impact is greatly enhanced.

After printing the Digital XR™ substrate, 'lines of print' are removed through a laminator based process. This leaves the printed image layers in exact registration and provides the necessary see-through areas.
